

The Theoria Medical Neith Care Model (Theoria Neith) is designed to take a multidisciplinary approach to managing care programs with the goal to improve patient outcomes. Neith leverages technology, combined with evidence-based preventative and interventional medicine to enable post-acute care facilities to accept higher acuity patients with better outcomes and smooth transition to the next site of care.

The Theoria Neith program sets to streamline and automate many of the manual processes such as manual reporting, analysis, interpretation, and communication of data involved in the management of acute patients, thus driving down costs, and above all, accelerating the level of acuity properly managed by the facility and its staff. Additionally, it connects previously disjointed programs to ensure coordinated decisions-making and delivery of care.

Theoria's Neith Health Hub enables a more proactive approach to managing care of each patient without burdening the facility with manual processes or cumbersome documentation, thus establishing a continuum of care, necessary to improve patient outcomes.

5-7 days a week physical rounding management and medical directorship

24/7 care through Theoria Medical's prioratery Telemedicine Platform with state of the art complex devices to assess patients

Theoria Medical's ChartEasy™ and ChatEasy™, fully integrated Electronic Health Records and Messaging systems with facility's systems

Utilization of machine learning and AI accompanied by proprietary evidence-based algorithms to guide patient care from the point of admission

Remote Patient Monitoring

Chronic Care Management

Wound Care Management

Return to Hospitalization reduction and Length of Stay management via our proprietary Physical Medicine & Rehabilitation program

Psychiatry and Substance Abuse Management Program

On-site STAT Labs

This coordinated and collaborative model reduces cost, improves quality of care and innovates the future of post-acute medicine. We are thrilled to partner with you to deliver excellent care to our patients and thus improve the health of our collective community.
